

# MintonShardeum

Custom Token Creation on the Shardeum Blockchain

*I'm "Minton" the token forger*

# Abstract:

- MintonShardeum is a decentralized application that enables anyone to easily create customizable ERC-20 tokens on the Shardeum blockchain.
- Built on Shardeum's EVM-compatible, dynamically sharded Layer 1 network, it offers scalable, low-cost, and secure token deployment.

# Key features

- Customizable ERC-20 Tokens: Name, symbol, supply, decimals, mintability
- Flat 10 SHM minting fee per creation
- 0.1% minted tokens sent to fee collector wallet
- Supports currently Shardeum Testnet, planned for Mainnet
- Scalable and secure via dynamic state sharding

# Future Plans

- ALL the minting fees are planned to be to Shardeum's validator leaderboard. (monthly basis send)
- Incentivize validators who keep rewards unclaimed, supporting long-term token holding and network stability.
- Give financial support to the validators who are in the “loserboard” the ones that spend more time in standby without validating
- Create a Minton DAO Token for the community

# Impact

- MintonShardeum empowers developers, communities, and projects to launch tokens in minutes, increasing adoption and activity on the Shardeum blockchain.
- By rewarding validators and promoting long-term token retention, the project strengthens network security and stability.
